

NetterVibration

Serving industry with vibration

“Every day, we strive to live up to our claim that we are the engine of progress in vibration technology. Every day, this is confirmed by the trust and satisfaction of our customers, worldwide.”

Achim Werkmann and Thomas Reis, CEOs

Innovation leader in serving industry with vibration

We are **NetterVibration**, internationally leading manufacturer and service provider in the field of vibration technology. Since 1953 we stand for highly efficient vibration technology “Made in Germany”.

For us, this is a principle that we live by. We combine valuable experience with excellent technical know-how and a passion for innovation.

We have customers in all branches of industry that rely on our high-quality and durable products and benefit from the added value of our individual application advice.

As a competent and reliable partner, we provide intelligent and customised vibration solutions for any application in bulk material handling.

At **NetterVibration**, we combine research, development, production and sales under one roof. This enables us to involve our customers in all processes at all times and to tailor products and solutions perfectly to their specific needs.

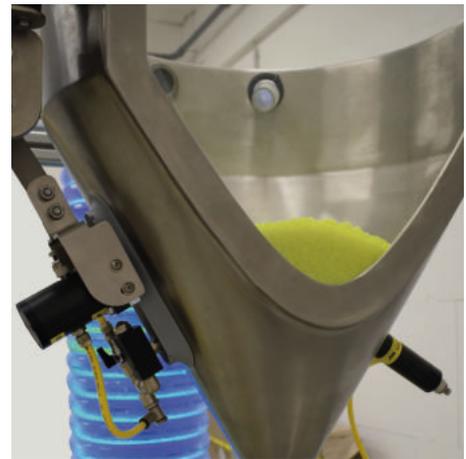

Decades of experience and excellent know-how

The added value of our consulting service

- Customer relations based on a partnership
- Decades of experience and excellent know-how
- Precise understanding of customer requirements
- Personal and individual advice
- Development of customised solutions
- Shortcuts: fast and competent decisions

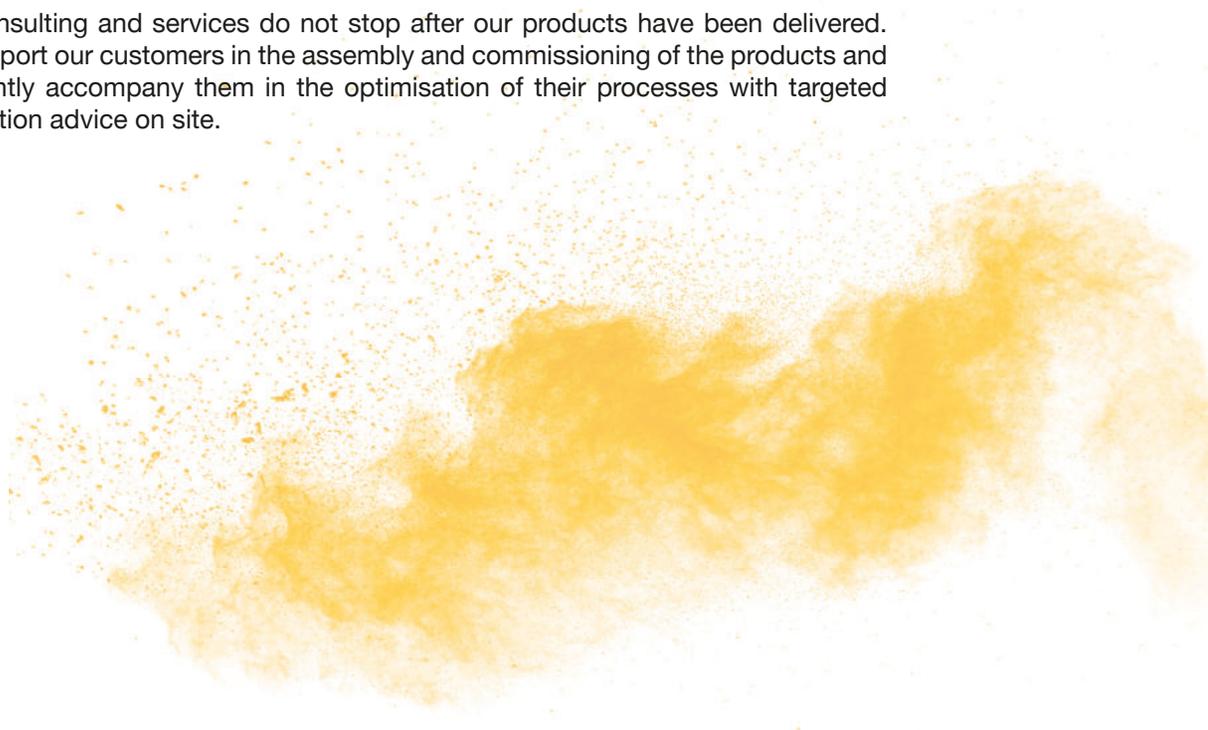

“We advise our customers individually on site and we jointly develop customised solutions that fit perfectly.”

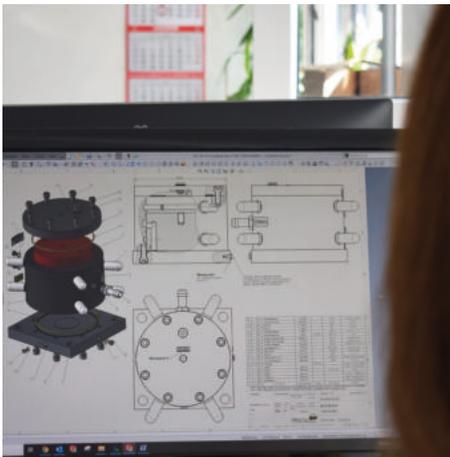

The customers' satisfaction is a top priority at **NetterVibration**. For us, personal and competent advice counts as much as professional service.

In close co-operation with our customers we develop tailor-made solutions for specific applications. Together we achieve unique results that perfectly meet their very specific requirements.

Our consulting and services do not stop after our products have been delivered. We support our customers in the assembly and commissioning of the products and constantly accompany them in the optimisation of their processes with targeted application advice on site.

*“From the first sketch
to the last action:
ingenious vibration solutions
at the highest level.”*

Vibration technology is a highly complex engineering science that forms an interface between mechanical engineering and process engineering.

Thanks to the expertise and professional competence of our innovative employees, we at **NetterVibration** turn brilliant ideas into ingenious vibration solutions. Technically well thought-out and excellently manufactured.

We cover the entire value-added chain, from the first sketch to the last action.

From standard solutions to tricky special cases: our engineers and application consultants for plant construction, drive and electrical engineering work together to develop every challenge until it is perfect.

The result is impressive: the high-quality products and solutions from **NetterVibration** stand for the highest quality, reliability and durability.

Fascination for technology with a flair for innovation

The added value of our technical quality

- Excellently trained engineers and application consultants
- Perfectly working supply chain
- Advanced technology and highest quality standards
- Development of individual solutions
- Close cooperation with regional suppliers
- “Made in Germany”

***Precision in processing
for reliable use***

*“Technically well thought-out,
excellently processed and absolutely reliable.
Our vibrators keep what we promise!”*

With more than 3,000 vibrators and impactors, we have the largest selection of industrial vibrators in the world. In addition, a large number of vibration technology systems with corresponding accessories complement our wide range of products.

These include individual devices as well as complete vibration systems, e.g. vibrating tables as well as conveyors and dosing systems.

Quality, safety and reliability are the focus of all our products. High-quality materials, well thought-out technology and perfect functionality characterise the vibrators from **NetterVibration**. Whether pneumatically, hydraulically or electrically driven. No matter whether large or small. No matter what value frequency or amplitude.

Our products also have a lot to offer in terms of appearance and shine through innovative design or individualisation according to customer requirements.

“With our sector insight and extensive market knowledge we are at home in every industry.”

The vibration solutions from **NetterVibration** are the guarantee of success for efficient bulk material handling.

Whether cleaning, loosening, dosing, sorting, feeding compacting or packaging: We get material moving.

With our wide range of products and solutions, we help manufacturing companies in every sector to simplify and accelerate numerous applications and processes.

Our comprehensive application knowledge enables us to specialise in particularly complex processes. We offer vibrators and impactors both for oil-free operation made of stainless steel and ATEX-certified for compliant use, i. e. in the food, pharmaceutical and chemical industries.

And of course, our product portfolio also includes devices that can withstand extreme temperatures.

Efficient application solutions for the entire industry

NetterVibration is partner of the industry

- Automotive industry
- Construction industry
- Chemical and pharmaceutical industries
- Foundry
- Consumer goods industry
- Plastics industry
- Food industry
- Mechanical engineering

Cleaning

Goodbye to bridging and material accumulation: vibrators and impactors ensure reliable knocking off and loosening of build-up and material residues in silos, containers and hoppers.

Concrete compaction

No matter if mass concrete or prefabricated concrete parts in the construction industry: fresh concrete becomes air-free in seconds with vibration and is uniformly compacted for perfect strength and stability.

Dosing

With vibration, bulk material can be precisely dosed. This applies to fine powders, pills, granulates, stones and even large automotive components. Our product range also includes dosing stations and conveying systems.

Emptying

Thanks to the impactors and vibrators from NetterVibration, goods and bulk materials are completely unloaded from containers, hoppers, silos, wagons and silo trailers. Easily and carefully.

Feeding

With vibration, conveyor systems can be used to gently move material, precisely dose as well as separate. A clear advantage compared to other conveyor systems.

Loosening

No more wedging, jamming or sticking of material during transport, conveying or production of parts, goods and bulk materials. Thanks to the vibration tables and solutions from **NetterVibration**.

Sieving

Efficient sieving for fast processes and neat results: i. e. when removing fragments from pasta, bringing powder to uniform particle size or separating and sorting types of screws.

Sorting

With the sorting systems from **NetterVibration**, different materials are separated from each other without any effort. By size, type, shape, weight and colour. For effective and accurate production.

Testing

Goods and components are tested for vibration resistance to ensure their quality. **NetterVibration** offers individual vibration systems, especially developed for testing purposes.

Compacting

Transport and conveying capacities can be used more efficiently by gaining valuable volume through the compaction of bulk material. This also saves space and, above all, transport and packing costs.

*“Moving things is our business.
That’s why we succeed with customised
vibration solutions for a wide range of applications.”*

2022

NetterVibration France SAS

The sixth international subsidiary of **NetterVibration** was founded in Metz, France.

2016

10th ISAS meeting

For the tenth time **NetterVibration** is bringing together distributors from all over the world at the International Sales and Application Seminar (ISAS) for comprehensive exchange and training.

2013

New generation and 60th company anniversary

Thomas Reis and Achim Werkmann take over the management of **NetterVibration** after many years of company affiliation.

2004

NetterVibration becomes a registered trademark

Francis Netter takes over the sole management of the company and registers **NetterVibration** as a trademark in the course of internationalisation.

1999

First branch office abroad

With the integration of GRUMAG AG, Switzerland, Netter GmbH extends its influence abroad.

1979

New form of organisation

Netter GmbH takes over all activities of the partnership.

2020

Further expansion

NetterVibration moves into the newly built company headquarters in Mainz-Kastel and founds **NetterVibration UK Ltd. in the United Kingdom.**

2014

NetterVibration España S.L.

In Villabona the new branch for the Iberian Peninsula opens.

2007

NetterVibration Polska Sp. z o.o.

As part of the further expansion, the Polish branch office was established in Katowice.

2003

ATEX certification

Vibrators fulfil the conformity for use in explosive atmospheres according to the ATEX directive.

1988

Patent application for first pneumatic impactor PKL

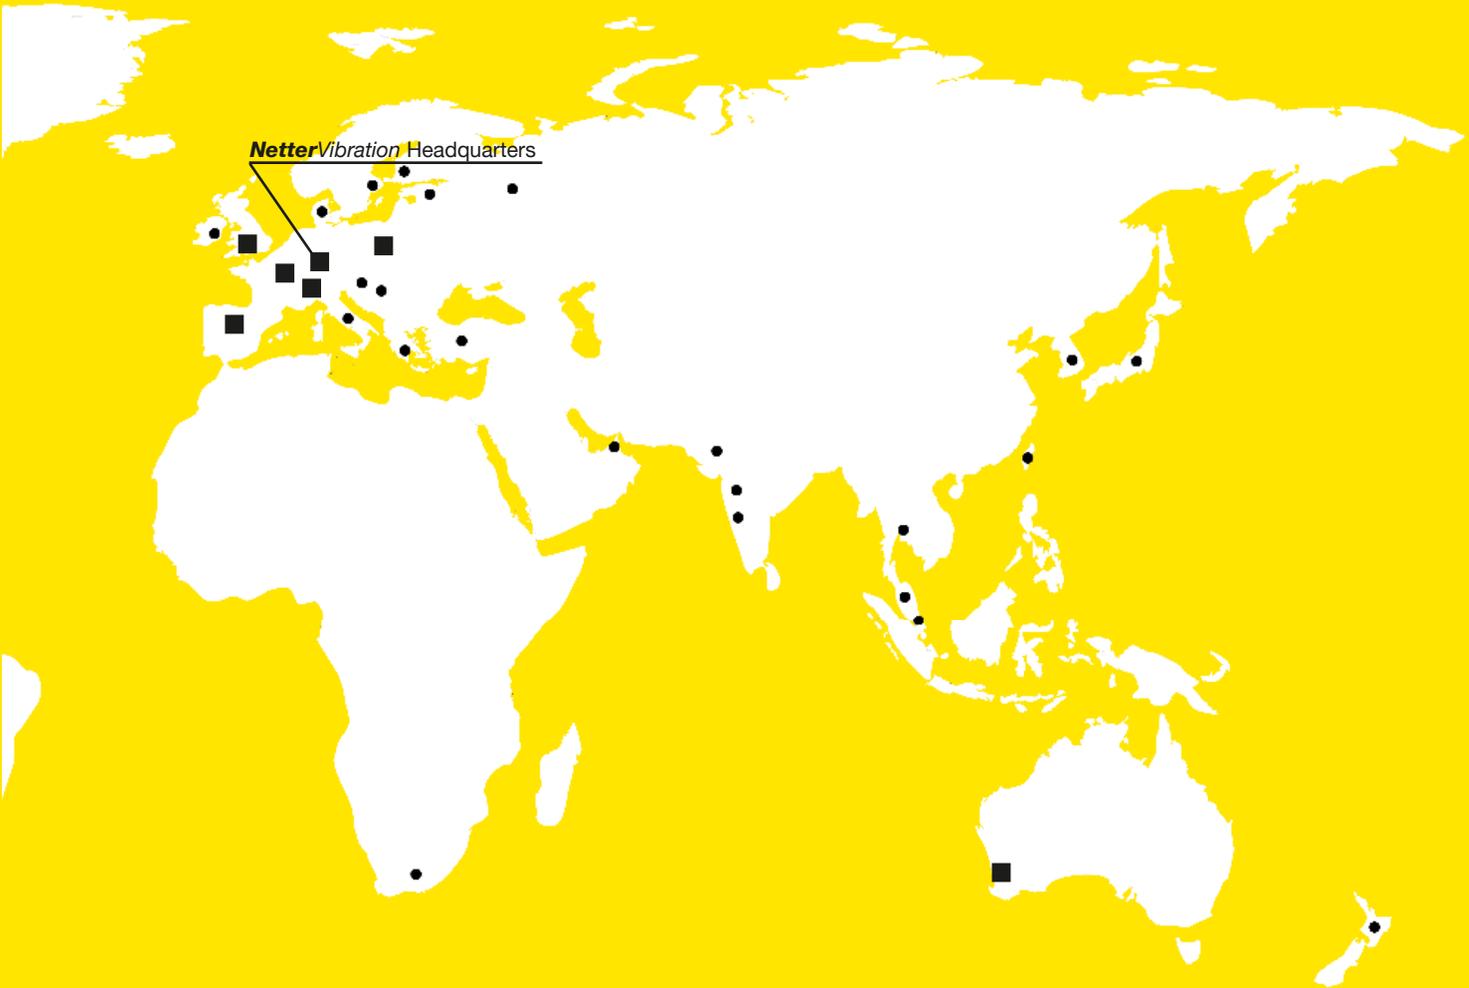

Netter GmbH receives the industrial property right for the pneumatic impactor PKL.

1953

Foundation of Netter Vibrationstechnik

Jean Netter and his wife Anne Marie found Netter Vibrationstechnik as a partnership in Wiesbaden.
